My Dear Dr

It was pleasant even for a short moment to see your head emerge from the rushes. If only to say "What are you about" When that ship of yours comes along I shall expect to see it crowned with Iunci more attractive in your eyes than ivy or laurel. Your letter contains less than the usual number of RRi. So I can answer in brief. Have been doing but little the past winter except trying to keep warm. I made one visit lately to I A Lapham in Mil. He has some interesting data in reference to that barometric wave of Jany 7th & 8th took hourly observations during the period of its greatest elevation which correspond remarkably in point of time with the observations at Albany N.Y. Had I been aware of its importance I would also have taken mine but I have only these

Jany 7th	8 AM, Barom	30.072	Th Dt	27. Th Wt	19
" "	2 PM "	30.160	"	27 "	23
" 8th	7 AM "	30.402	"	24 "	8
"	2 PM "	30.346	"	25 "	20

Clear with a raw East wind.!

What were your observations?

In what form and when will you publish your paper on Quercus? I do not feel deserving of the commemoration suggested by Prof Castano. but will furnish items as desired. When will his memoir be out? I hope it will be fully illustrated. Why cannot we get up a colored figure of N. polysepallum as you once proposed. I would contribute towards the expense. and you could no doubt influence Shaw in that direction. — I wish you would hurry & get rich. So that you could quit practice of medicine. There are plenty that can attend to that, but few that can work at botany as you can. — My wishes are still directed Europe ward, but financial obstacles get stand in the way. I am waiting to sell some property and then must be off — in the mean time I expect to do something in local botany the coming season. I have the promise of a free pass for the year over a new RR from here to Milwaukee which I shall try & improve for botanizing purposes. may stumble on some juci — Dr Gray intimated some time ago that he thought of coming west for a trip. Can we coax him along this season. he could give Shaw quite a boost in his scheme — Dr Fendler really to go back to Missouri this Spring — A good joke on Dr Gray that. hoped Cannon speech of his but perhaps it would not do to joke him about. though it sounds funny. I will write soon and send that memoir. also some barometric Rs. this much to let you know. What I am about.

Sincerely Your

L C Rugby

Davenport March 30th 1866

My Dear Dr.

Yours of 26th is just received. We are having a second edition of winter with snow & ice in abundance navigation only just open. I am almost ashamed to send you my limited Diecious sp but at least I wants them named under your revision I will try & do something in that line this year

Your suggestion in reference to that Polar Expedition stirs up my old roving feelings I dont know but I would like to go under certain conditions. viz to have all travelling expenses paid going and returning & facilities for making and transporting collections for my own benefit & profit, —

Missouri Botanical Garden
copyright reserved

I should prefer to have it only as a summer trip. So that I could return as early as Sept 2 would of course take my barometer make continuous observations & write out a report of the trip I would also stipulate for the privilege of corresponding for some journal as a matter of profit &c &c

If you think the conditions above specified would be agreeable you might confer with Mr Gail and I will take the matter under consideration and give a definite answer — Of course my object is to get all the information I can over the widest scope of country with a view to future use I would collect only new or specially interesting things. The part I would especially like to visit, is west of the range on the direct line to Salt Lake which is a new and comparatively little explored country

Please let me know in reference to this matter as soon as possible that I may make necessary arrangements should I conclude to go also find out the proposed route, time of starting, and what time is proposed to complete the trip.

For that month out of your I would suggest coming this way of course, and then going on to Milwaukee, thence to Green Bay &c &c — If I am here you can count on my company, sure

Is the Vol of St Louis Transactions complete or will it be delayed for your papers?

That Cannot speak of Dr Gray is in Silliman for Jany, 1866 as President American Academy of Science

In haste Yours truly

C C Parry

Davenport April 18th 1866

My Dear Dr

Yours of late date duly recd. I had hoped to have heard something more definite in reference to that Pike Expedition. But time enough yet for developments. When fully informed please let me know the results.

From the Rocky Mt News which I get weekly is a report of RR Survey from Ft Riley Kansas to Denver. by what is called the Smokey hill route concluding with a table of elevations I copy two items in reference to the elevation of Denver City — which shows a discrepancy of 500 to 600 ft below our barometric determinations!

"Denver city distant from Ft Riley 466.61 miles is 3757. ft higher than that point; is 4108. ft higher than the Missouri River at Wyandotte (mouth of Kansas). and 4336. ft. higher than the Miss River at St Louis.

"The Platte River is just at 15 ft below the Denver city station" —

What means have you for checking these results? This survey was made I judge in a hurried manner between 15th Sept & 11th Nov 1865. Have you access

MISSOURI BOTANICAL GARDEN
copyright reserved
0 1 2 3 4 5 6 7 8 9 10 cm

In any other R R Surveys different from this? How do the elevations given by Wyandotte & Ft Riley agree with what you know of the same points. I should be sorry if our results derived from such reliable data should prove so unreliable.

My specimens of Abies Engel 12 to 15 come out very nicely being covered with leaves they will make a fine show this year. How can I best send 2 or 3 specimens to Shaw?

Our backward season is now hurrying along at a rapid rate to day is rainy and vegetation is fairly jumping out of the ground. I am kept pretty close just now by sickness in my family. Else I should feel like going somewhere

Yours truly E E Sarg

My Dear Dr

It would no doubt require the tactics of an ex-commander of the Army of the Potomac to see the point of the joke played on us by the Supreme Military authority of the Western department. At least it is quite cool if not refreshing this hot weather. to note the nonchalance of the response as if we were asking the favor instead of accepting a rather equivocal position. — Well perhaps it is worth something to find out that a "lying Sh" does not make a healthful Maj Genl. I at least am well out of the scrape so good bye to the "hero of No 10". What next? Why of course since "the Cholera has not reached St Louis. I shall expect that visit, and will here pledge myself in advance to Mrs E. to have no interference from "fashionable Company", You will of course bring your bog-boots along prepared for the marshes — Why not come soon before the sick harvest sets in —?

This week I expect to go and see that captured Southern harbor. We then get more definite information, as to the character of probable ownership. perhaps the Sunci can spared D! will write you more fully about it

Davenport May 31st 1864

My Dear Sir

Since writing you I have been to see the Captured Southern herb which turns out to be in bulk a very indifferent European collection with some odds & ends from other parts of the globe including a very few nice things but badly worn rather. Many of the specimens have the name of "De Candolle" on the top of the label, in a very neat hand writing, perhaps his own others bear the name of a German I cant make out. No localities are given except some garden specimens in French "Jardin des Faculté" a few "Vincennes" a very few Minnesota plants very indifferently put up with occasional notes & crude descriptions mostly common plants & garden specimens. The name of the owner does not appear at all!! I infer it may have been some amateur or French physician. Among the Mis specimens is one (enclosed) under a pencil name Juiko bilobala which I cant find. I have leaves from another source. So I suppose it is a garden shrub of which you can furnish the true name. It is singular with that peculiar fleshy texture and parallel veins. The Juncii are half a dozen specimens of common European species. So much for the Captured herb

MISSOURI BOTANICAL GARDEN

I was more interested in coming across a self taught botanical artist who had made a number of colored sketches of a number of our common plants including some Southern. I think with a little training in scientific botany would make a very creditable artist., I send a sample. I have given him some Rocky Mt plants to sketch He is a Dr Hudson a respectable practitioner about 35 years of age is quite zealous, lives in Lyons, If he does well I shall set him to work I have sent him a copy of St Louis Transactions including our figures he will try his hand at coloring. He would be a nice hand to go out to the Mountains & sketch fresh plants. i.e. Nuttall polygetsphalum &c

I suppose you have heard from Schott he seems uncertain whether he has any Sumei from Jucatan. I presume he will have a good supply of "working specimens" If seen he wrote you about Cacti. — What about that visit? Shall expect to hear from you soon

Sincerely Yours

My Dear Dr

Many thanks for the copy of St Louis Transactions, including your admirable Juncus paper. I shall never feel joking you again about your boggish propensities, when you can make such common, vulgar? things evolve such beautiful scientific results, — such a year's "closet labor" puts to shame the work of us field observers who see so much, and accomplish so little. I hope we shall not have to wait long for the sequel of your paper. I shall want some more copies but will write you again about it — I dont seem to get in the way of doing much botanically this season, have on hand some business negotiations, for the sale of property which occupies my time and confines my thoughts from more congenial things. I think of visiting Vasey soon who I do not know personally. hope to do something towards your Juncus sets, — will consult with Vasey about it. You do not say whether you will come up this way soon for a vacation, and when? I sent you a few days ago, a letter containing a sketch from a self taught botanical artist Dr Hudson of Lyons Iowa which I would like to have you criticise, and make suggestions on

MISSOURI BOTANICAL GARDEN

I have these equally good, with a little botanical training would I think be very creditable work. he seems to aim at accuracy as opposed to mere artistic display. I have recommended to him to make dissections and analyses and study the plates of the Pacific RR reports he also to be more radical (according to your views). he seems particularly interested in colors, and hence has not done much in drawing from dried specimens

Hope to hear from you soon

Very sincerely Yours

Davenport. Iowa July 10th 1866

My Dear Dr

Yours of 22d June has been lying some time unanswered, I have been confined by company and do not get out much beyond the town limits. — My botanizing has been mostly confined to weeding in my small garden patch. My little pines look well. also Tamesia. which grows lustily and seems to suit the climate It has quite a range in the Mts from 6000 to 9000 ft so that it probably has some adaptive power to suit different conditions. I have also a fine bush of Ribes Cereum, which is worth cultivating for its persistent bright colored fruit I had intended to visit Vasey this summer and confer with him on Juncus collections. on writing to him at Ringwood to ascertain the best route of reaching his place I received letter from his new location. notifying me of his change and also the sad intelligence of the loss of his wife I expect however to visit that section during the season & will see what I can do in the Juncus line —

My botanical artist receives your suggestion with good grace realizing their truth. I now learn that he served apprenticeship as engraver and so has experience in that line of business. he has made some very good sketches of Rocky Mt

0 1 2 3 4 5 6 7 8 9 10
cm

MISSOURI BOTANICAL GARDEN

Plants. which I have revised. Big
Calypso borealis very good. Polemonium confertum
also good. Primula Parryi good but not properly
colored — Gentiana barbellata. good plate
colored — & Parryi, and some others. We
have been talking of a trip to the Mts with
a view to making sketches some time.
I have loaned him my copy of Gray's Genera
to get some idea of dissection &c
Saul Pope has just got out to Denver. Sun
27th goes thence to New Mexico — So I learn
from my Rocky Mts newspaper. They are
doing the wond. work of a wagon road across
the range near my old location Empire City
when that is done I shall want to go
again. — Your RR is progressing finely
I do not see why it should not reach Denver
in 3 years at least. I send enclosed
$5,00 as per your bill. also stamps for
postage I suppose you will have your Sunday
paper by itself — of which I should like some
extra copies. I don't hear from Sir Lubbock
What is he doing?

Sincerely yours

My Dear Dr

You have no doubt been waiting patiently for a report from me of my visit to the East. and will perhaps be surprised to learn that I got no farther than Milwaukee when owing to a change of programme I turned back and have since been quiet in my old quarters. Not so very quiet either - for in the mean time I have made a change of location. packed up my duds herbarium &c. and am now living in the country 3 miles from town. My chief motive in this was to get rid of the cares of housekeeping and be prepared to take up with whatever may offer in the way of exploration next season In the mean time. I am very comfortably situated for winter work while at the same time I am free to leave whenever occasion call for it I have my young pines & Sanicula roots dug up & buried for the winter ready to set out, or distribute in the spring. So you see I am like a soldier on the march. ready to move at short notice. I have lately packed & sent to Dr Parry some sets of wood blocks which I am tired of keeping on hands. My herb is yet unpacked but I must soon get at that labelling job!! I presume you did not write me at Sandy Hill. as I have received no advises to that effect. though I hope you rec'd safely my paper on Rocky Mt Diorr. which I mailed

0 1 2 3 4 5 6 7 8 9 10

MISSOURI BOTANICAL GARDEN

you just before leaving on my Eastern? trip.
Now I suppose you are getting more leisure from practice for botany, and improving perhaps on some new hobby — When you make your criticisms on my paper please for rewriting and completing the alpine list, also inform me as to the printing so that I may have the manuscript ready in time
I have nothing definite for next Summer
Pikes Peak will be rather stale when the RR gets there. but I may go for a Middle Park Excursion a friend of mine who is fortunately rich is talking about going out for a Summer trip and wants me to go along. My house in town is only rented not sold. otherwise I should think of packing up for Europe next Spring and see the Alps. Do you get decide definitely on your plans. in regard to George & yourself & wife?
Is Dr Bigelow still at Detroit? engaged in his "Eureka" investigations? If I go to the Rocky Mts I must help out those Indian sets.
Let me hear from you soon & let me know what you are up to botanically present my regards to George and Mrs E.

Yours truly C. C. Parry

Don't forget your photog. before you go to Europe!!

Davenport Feby 28th 1867

My Dear Sir

You see I did not go down to the Convention. I found that it would throw me into a crowd of politicians whom I am not like and so respectfully declined, and am now stuck fast in country mud. I have no definite plans yet for the season. though our attractions are still strong. You St Louisians are on the slow coach system we expect to get our road through to Denver this season So I renew my invite to come up here and go out in July for a summer vacation. You have not yet told me whether Bigelow is still at Detroit working under Uncle Sam. and ready to devote spare time to Naphan & Junius this year I have written to Dr Gray urging him to come west this Spring to see the country, and work upon Shaw. to secure your help. and give you a Curatorship so that when you come back from Europe you can step into a snug berth for the ballance of your days. and go to sleeping over botany like Torrey. I have thought seriously on this subject for a long time. There are plenty of men competent and glad to do medical practice. but no one to

do your botanical work, and if you can do so much with a perpetual load of medicine on your shoulders. a fortiori when you can shake it off. I heard from Brewer lately he seems somewhat riled at A. Hoods quackery both botanically and hypsometrically. he claims to have collected 3400 species of plants most of them new sp. Have you read his account of ascent of Mt Hood. which he makes over 17000 ft by boiling point. 180°7 according to that however it should be 20000 or upwards. I am glad that the mountain can be ascended however so that some time this mooted question can be put at rest. Bayard Taylors book on Colorado is out his botany is funny. he goes into fits over my primrose as a new discovery and find in Middle Park an "orchidaceous plant almost identical with the Cyclamen of Europe"! his elevations too are decidedly high Mt Blanc is nowhere in comparison! with Mt Lincoln &c &c But then he writes for the people. When will you commence publishing next Vol Transactions better scribble your criticism on my paper & return it that I can copy for the printer. Write soon

Yours

C C Parry

Rec'd April 1st
Ans April 18 Davenport - March 28th 1868

My Dear Dr

I am getting the mountain fever bad, but I need not ask you for a prescription because you would only say, Go! I have just rec'd a long letter from there in answer to some enquiries I made in reference to the amount of snow fallen this winter not a very definite answer however the accounts varying from 10 to 40 ft! only this positive that an unusual quantity is now on the ground with a fair prospect for summer floods?

But more exciting than all a friend of mine has a cabin built just at the foot of Grays Rock, out far below the timber line, & and roads have been constructed from the new town of Argentine, over the range to Blue River, and to South Park I think the town of Argentine must be on the

Missouri Botanical Garden
copyright reserved

lower slope of Mt Engelmann. which contains rich silver lodes. So you must give up your European trip and go and lay claim to your share of the treasure including more fossil plants that we found last year in Rock Island

That "May Palmer"? you spoke of in your letter is May Powell. and I learn that in his plan of exploration he has included me as Botanist. also my old companion Dr Velie as Conchologist. He expects to secure some travelling facilities for the party and will meet us soon at Rock Island to talk over the arrangements. I am anxious to go. as the prospects would be that I could push over toward Salt Lake. and thus cover new grounds I would also have a chance to measure some of the high peaks at the head of Arkansas including Mt Lincoln

So you see I am in quite a fair way for another Summer trip. I wish you would look over my snow paper soon and return for correction, or if it will pass pretty well as it is let it go to the printer and make corrections & additions from new data.

I never was quite satisfied with Dr Gray's determination of Delphinium Elatum? it is so exclusive in its habit. and invariable in its appearance I only find it on the upper borders of alpine thickets. associated with Cardamine pratundifolia; Mertensia Sibirica and Pedicularis Parryi & on no doubt you will have a bright job in fixing up Haydens hay. but will no doubt find some choice needles in his stack

I must close for meal.

Yours truly

My Dear Dr

Your note of 19th is just received. It would seem that the matter in hand is progressing favorably. The details I shall be satisfied to leave in your hands. As to salary, I think I ought to get $150 (in gold) per month but will be satisfied with less if the amount should stand in the way of a definite arrangement, than the collections will be worth something but that might go for your share of the spoils. I would like to get as early a notice as possible of any definite arrangement, as I shall need some little time to settle up home matters before leaving.

Missouri Botanical Garden
copyright reserved

As to my association with Le Conte as Sub, I do not doubt but I could get along pleasantly. but I have the same suspicion you have that his special vocation has hardly fitted him to conduct so important a work as a thorough Geol Survey. Still it might answer for RR purposes, and by making extensive collections he could get his work colaborated by more competent hands. Probably your suggestions were the most judicious under the circumstances and the R.R. Co must assume the responsibility. We want to get all the Botany we can out of it and so a better policy will not come amiss. I still feel somewhat surprised at your compliments on my "Calligraphy" but if it accomplishes the purpose I ought to feel satisfied.

I shall accept the pleasure of closing my civilized carcass in that hospitable garret of yours perhaps I may bring the wife along to help me pack up. Of course you will duly inform me if matters of advisable you may telegraph here at my expense. will try to look up that Barometric data

Sincerely Yours

Camp near Ft Hays
June 16th 1867
post mark June 17

My Dear Dr

We have progressed thus far on our route 95 miles from Salina and 130 more will bring us to Pond Creek where our work of Survey commences and we leave the Smoky Hills to come over to the Arkansas. We have encountered some severe storms of rain occasioning floods in all the small creeks & making water plenty and grass (Buffalo) very vigorous. I find quite a contrast between this & the Platte Country. this is much more uneven better watered, and more expensive for RR construction also abundantly supplied with building & bridge Rock. The cretaceous strata cropping out along the borders of most all the streams. At Ft Harker I found the strata containing the Dicotyledonous leaves and obtained some fair specimens. among them a magnificently veined leaf over 6 inches in diameter. like Hamamelis? It would take some time and patience to make a good full collection but it must be done by some stationary collector who can watch the quarries. The matrix is a very soft ferruginous sand clay which hardens on exposure and then specimens can be chiselled out to advantage. I keep up my observations as often as good opportunity or a regular station offers & send you the record up to date.

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

in the march I shall observe altogether with the new Barometer 1579. which is in good order the mercury clean and adjustment exact. In botany I see little that is quite new to me but since interesting things. Astragali are coming out in force and I shall make a pretty full collection. No Juncei yet and only the most Eastern Cacti. Mamm vivip. & Nuttallii

Our organization is very strictly military, too much so to suit the young men who have to march in the day & stand guard nights. We are to have an escort from this point as the Indians are disposed to be troublesome. showing great partiality for long scalps. In order to trace our route & note localities you had better apply to the RR office for a map. Mr Percy. The president is now beyond here with a military excursion party — we shall probably meet them on the way to Pond Creek or Ft Wallace. I write under you again from there or through Mr Percy. I have an acquaintance of Mr Schutts who had made one of the Topographers. I only wish we had Mr Rocktin in place of the bulky photographic apparatus which has been a failure. I hope to hear from you occasionally. Send your letters through the RR Office. I think I shall be assigned to the northern party through the Sangre de Cristo pass into the Rio Grande. I will write you again from Ft Wallace in mean time farewell

Sincerely Yours C B Parry

No. 3 Rec'd July 10
Ans. July 22

Ft Wallace Jun 30th 1867

My Dear Dr

I have just been notified that a mail will be dispatched thus P.M. to run the Indian gauntlet for St Louis. I therefore hastily copy the ballance of my record to date and send you a letter dropped in the mail box several days ago. Contains the record before this. I have been very careful with my observations here on a standing point and hope they will give good results as compared with the survey levels, which can be directly compared from station here which by survey is 2610 ft above low water at Wyandotte, mouth of Kansas, which you can get at Pacific RR office, and then reduce to St Louis.

I have no time to tell you of our Indian troubles, only the 2d day after reaching here our Escort had a fight and lost 5 men out of 50 engaged. Three of them scalped & horribly mutilated. This has made a big scare with our chiefs who hesitate about going on with the survey without a larger Escort and do we await Genl Hancocks return from Denver. In the mean time I am picking up what plants I can without venturing too far from camp. Most of common plains species but in good condition. There is considerable dissatisfaction with the employees of.

the Expedition and a number expect to leave when Genl Hancock comes down among the rest Dr Bell our photographer. who of he goes will take on you on his return & take a parcel of plants I still hope we will manage to get along slowly towards the mountains so as to secure better picking but we cannot make more than the Ice this season & then probably disband for the season.

I write more fully by Dr Bell in the 1st regular stage and hope when we get on the Arkansas we shall again have our postal communications open. In the mean time I hope you will drop me a line occasionally at the R R Office which will be duly forwarded with other social matter. You will notice we have warm weather here but dry. The muddy Hill is reduced to a mere brook and above here is lost in the sand. I have a good deal more to write but must wait as it is more dark and hard to see

Kind regards to Mrs E. & family

My Dear Dr

Fort Lyon Colorado Terr
July 17th 1867

I received at this place your letter No 3. (June 21st) No 2 having not yet come to hand. We accomplished our journey down to the Arkansas without mishap making the distance from the Smoky Hill to Arkansas 72 miles, we struck the Arkansas 42 miles below here being so far misled by Popes map. There was very little of interest on our route just a wide grassy upland with a succession of swales & depressions. The principal drainage being to the Arkansas. no trees, shrubs on the route and no permanent waters. You will be able to see by the levels given the profile of survey - by which it appears quite contrary to our expectation that the Arkansas was higher than Smoky Hill though perhaps the greater westing would account for the difference as the fall of the Arkansas of our survey is here 7,5 ft per mile. The river is now at flood height & is a very respectable stream. The valley is much more attractive than the Platte on the same parallel of Long. and is apparently adapted to cultivation. For several miles below here there is an outcrop of cretaceous sandstone bluffs. well adapted for building purposes and a fair amount of cottonwood timber in the bottoms. The location is a new post and is located 3 or 4 miles below the mouth of Purgatory on the south side. There is a fine spring here which shows a temperature of 54,25 and a yearly mean that I get from the records of the old post for 1861 gives a result of 54.18 They have a barometer at this post a very good one but I do not have much confidence in the observations I found

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

on comparing barometers that theirs ranged nearly 2 below mine & examining the cistern I found it very dull so concluded that there was air in the tube. I was also obliged in my own case to take hold of that matter as one of my barometers 1878 was wasting mercury and in trying to see where the fault was I got a bubble of air in my tube so I took the thing in hand and emptied both tube & cistern cleaned the mercury & returned it. I had some difficulty at first with small air bubbles in the tube but recollecting your advice on the subject I let up a large bubble from the bottom and gathered them up closed all tight and now the instrument works well. Having then got confidence I took hold of the Port B. and served it the same way got it so that it gave a distinct vacuum click. and brought the range to a higher elevation. I then took up my old barometer which was very dirty & cleaned it up so that now I have all in good working order today I unscrewed the tube attached thereto and enclosed in a letter to Green directing to repair & send by express to Santa Fe. So that as the present state of the case as regards barometers. As to calculated obs. I am still at a loss. to refer our RR starting point to Wyandotte. perhaps you have got it so as to make direct comparison with our barometric levels. Talking to Col Greenwood Eng in charge of survey to Denver he advised me to apply as I can you do so to Mr T McKissock Supt Missouri Pacific RR Office Olive between 5th & 6th St St Louis for information of RR levels from Wyandotte or Leavenworth west. to T. Riley So that you may get a starting point to refer our levels to

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

According to the best information I can get Selma is 800 ft above Wyandotte. I think this will compare well with your results 739 above your B in St Louis. But to connect the Wyandotte starting point you must refer to low water in Mississippi at St Louis, which please give me when you next write. I hope we will be able to determine these fixed points but if not we can take some intermediate well determined one for our based of comparison. As to the irregular rise at Selma & Spring Creek you are no doubt right in discarding them as the weather at that period was very unsettled & at Spring Creek we experienced the heaviest storm I ever saw. I shall again look carefully over the Barometric record here & select such results as seem to be reliable. As an example of the way the thing is managed I found the neatly copied record of Barom. obs during the first part of June. ~~backed on to~~ ~~the a~~ taken at Old Ft Lyon 22 miles below here backed on to the continued observations made at this place for the latter part of the month and a monthly mean made from the whole!! with no item under the head of remarks to indicate any removal!! Otherwise I think the Hospital should be charged careful in making his observations & regular in recording. — I told Col Greenwood that I would ask you to mail him a copy of our altitudes in Colorado and probably the best way would be to cut out from some pamphlet the sheets containing & enclose in a letter

0 1 2 3 4 5 6 7 8 9 10

MISSOURI BOTANICAL GARDEN

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

Direct to Col Greenwood in charge of Survey U.P.R.W. & D Denver Colorado. he will probably not be there for two months yet I think he is a very reliable energetic man. a true chief. who is willing to work In return you might ask him to send you his levels from Ft Wallace through to Denver. I shall give him your address and ask him to call on you when he returns to St Louis next fall

We have got fairly out of the Indian scare and military discipline is relaxed - but still it is necessary to be on our guard. I understand there is to be a division of our party there one to go by Sangre de Christo Pass to the Rio Grande and down to Albuquerque which I hope to be connected with the other the ordinary route by Ft Union to Santa Fe I suppose I shall know about it before leaving here I find hereabouts little of botanical interest so I amuse myself with radical investigations at one of our camps by the caving in of the River banks there was brought to view an entire root of Shoreia Leptostylis of which I took measurements and weight & made a rough figure I will send you my note when I get time to copy. Total length 7 ft 6 inch circumference largest part 2 ft 4 inches weight (dried) 22 lbs. Dale notes given some other time You have received before this the small parcel sent by Knapp I dont know when I shall get any letters from you if I go on this branch party. but if you write

0 1 2 3 4 5 6 7 8 9 10
cm

MISSOURI BOTANICAL GARDEN

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

keep writing I shall get them some time
I wish you would send me in a letter the steps containing my altitudes in Colorado I forgot to bring the pamphlet containing them with me but occasionally want to refer to them in a serious of comparison. Our photographic arrangements get on better than they did. Dr Bell is a very nice companionable fellow & keeps up his interest in botany. Drains on me rather largely for pressing paper which I can spare now but must save for contingencies. Le Conte is very lazy hardly stirs from his tent or ambulance. Every one in camp remarks it and wonders how he will be able to make out a report. This is not a very pleasant locality. on an exposed gravelly bluff very dusty & bare of vegetation but some of the views are very fine On a very clear day one can just distinguish Spanish Peaks but I have not yet been able to separate them from horizon clouds. Beyond this there is said to be a good farming country and one of our foraging parties came in yesterday with fresh vegetables. a great treat We leave here I suppose next week Monday and I hope will experience no more delays till we reach the Rio Grande. Must close for this present remember me kindly to Mr & Mrs George

Sincerely Yours

E E Parry

Camp on Huerfano near
Cuaja July 30th 1867

No. 7.

Dear Sir

Here is my barometric record to date. we are crawling slowly towards the Mts near which we shall be among them. we just getting into the cedar or Pinion region no new plants yet. Opuntia arborescens has come in in force. This is a thickly settled & very fertile valley. produces large crops of corn. is mostly worked by Americans. on the Mex peon system. We are glad to get among signs of cultivation. we shall be pretty much on Fremonts route till we reach Ft Garland then we follow down the Rio Grande to Albuquerque

MISSOURI BOTANICAL GARDEN

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

I do not know whether I told you in my last that I was connected with a detached party, our chiefs having gone via Purgatory. So that I shall have some new country. There are some high snow peaks near Sangre de Cristo Pass. I shall try & climb at least get into the Alpine region. Hope to reach an elevation of 14000 ft. Just above me the Huerfano passes a canon for 20 miles through sandstone of Cretaceous formation sloping at a low angle to the East apparently on the line of depression beyond this we shall come to disturbed and metamorphic rocks and some igneous bedded & fissures shot all the adjoining hills. The enclosed grass Andropogon ? is characteristic of all the uplands of this district & Arkansas. Which species is it It makes tolerable fodder but not equal to Chondrosium or Bouteloua I hope to hear from you at Ft Garland as our letters can be forwarded there It will take us till 1st Oct to reach Albuquerque & then I suppose it will be decided whether to push on west or return East for the winter. Pity if I should have to go over Beckwith's route again in the winter —!!

Rainy season has set in in the Mts but we may see it get at a distance. You will see from record that we have had days & cool nights. Shall be glad of cool days again when we get higher up.

Bedto. at foot of Rocky
Aug 7th 1857

My Dear Sir

Here is my record to date by which you will learn that I have at last reached the Mountains & now commence the ascent of Sangre de Cristo pass over the route followed by Gunnison in 1854. There is a well marked station at the foot of the Pass where the Huerfano passes the 1st range of tilted & metamorphosed rocks. This morning I was fortunate enough to find in the interest included strata an abundance of fossil sharks teeth (Ptychodus & Lochatch Jelly) occurring in a hard ferruginous sandstone dipping 50° to the N E. Found then to the west sandstone & petroleum shale shale & over gradually merging into the red marl from of granite

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

In my last Sept 7 stay Lett. we did not get above the timber line or into the proper alpine district but still high enough to find Pinus aristata and Abies Engelmannii showing their usual character of other plants hereabouts are as rich as at Goodyera pubescens, Chimaphilla umbellata, Sorbus Americana. I do not yet know what kind of alpine region we shall reach in climbing the range but I hope to get high enough to determine something of the range of alpine plants when I write you again it will be from Ft Garland 35 miles distant and then I shall have more to say on these matters which I enclose specimen of a very interesting P. Edulis as abundant here grown with red cones

Truly yours C S Sargent

MISSOURI BOTANICAL GARDEN

When I reach Albuquerque I hope to hear from you a full account of results of Barometric Obs &c &c I shall then probably have time to overhaul my collections & notes, and see the season's work. It still seems uncertain what will be done with our party. You at St Louis would have the best chance of knowing what the Co propose to do. There is a rumor that Prof Wright is to be removed in which event probably his particular pets would share in his fate. I presume also there would be an entire reorganization of the party. I should like to go on well enough but it would be rather a cool joke to botanize as Bigelow did through Arizona in winter. I would rather go back & work up results & come out again. A great many things I could tell you about that I do not care to write.

MISSOURI BOTANICAL GARDEN

I am collecting seeds freely but Cacti are rare in the whole section so far traversed and when met with gone out of flower. I enclose seeds of the common bunch Cereus of this region probably C. Fendleri. It grows to a very considerable elevation & flourishes in the Huerfano valley. I think it ought to be quite hardy. It bears a very respectable fruit and grows in bunches of several hundred. I do not see it yet on this side of the Mts. Echinocactus Simpsonii is also common growing even as high as summit of Sangre de Cristo. No fruit could be found. I have also stumbled on some Yucci but none of the strictly alpine. Do not fail to write me on receipt of this to Albuquerque and especially recapitulate results of observations as I may need them to make up a preliminary report.

Sincerely yours

C. C. Parry

Since sending off my last came

Rec' Octob 2
Ans — 16

N. 11

Santa Fe. Sept 19th 1867

My Dear Sir

We reached this place on 16th and since then I have been busy packing specimens I have sent to you by express the bulk of my Botany I wanted to send the whole but the Box was not large enough, and I had a good deal to do in marking & packing fresh specimens so that I had no time to put up the botanical specimens in good shape and label &c as I expected to do at my leisure at Albuquerque You will have to do the best you can. I have sent all my specimens the express expenses which will come to $20,00 or over must be made out of the specimens or I will divide with you and consider the collection joint property. You had better overhaul selecting such specimens as you want to study or distribute and leave the bulk till I return when we will arrange about distributing the whole collection. The seeds of course you will want to distribute at once. Please send a small assortment of anything choice to my wife in Dunsfriesshire balance at your own discretion. In case you should leave for Europe this fall. The collection of plants had better be sent to my address at Davenport But as you have not intimated anything of the kind I infer that you will not go at present As far as I can learn our party will organize and move on the River below here & proceed at once on the

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

Survey to the Pacific, in two separate parties. one on Whipples route which I shall probably accompany the other on 32°. parallel. Capt Wright is still in charge though we had heard rumors of his removal & Capt Polanco is now here attending to the interests of the C in the reorganization. I do not know whether Le Conte goes on or not I have sent in the Cactus collection. a few wood specimens. among them a full section of Pinus edulis. If you can make some excuse to examine the same perhaps you can manage to graft. a half section — for botanical purposes If so please save a slice for me I could have sent you a large lot of ripe cones of P. edulis in the Box but neglected to collect while passing along I send a small sample of the roasted seeds as found in Santa Fe market. I am not prepared with Santa Fe or botanizing ground. I have tried to locate one week or I can the scene of Fendler's labors. but there are no nuts near to afford Spruce plants the expect to leave the day for final rendezvous and when I get some leisure I will write again I shall enclose with this Express receipt. so you may be prepared for the box You can put on the results of your examination at your leisure direct your letters through the office of P.R.R.S. I have nothing late from you but shall expect several letters at Albuquerque.

Yours C. C. Parry

Prescott, Arizona
Nov 23d 1869

My Dear Dr

You will see that I have brought up in Central Arizona, and have been testing the climate of 35°— We had a good freezing time on the slopes of San Francisco. Thermometer going as low as 15° F but the days are generally warm & pleasant no snow yet— Botany is quiescent just now though I have lately seen in fl & fr Cowania Sandburniana Torr I am surprised to find in this region such a northern aspect of vegetation the pine woods, exhibiting mostly northern forms. This is the locality where Coues and Palmer made their collections but I doubt if they did the locality justice. I have been hoping to stumble on the Lewisia nov sp. but the season will hardly allow

Missouri Botanical Garden
copyright reserved

Juniperus pachyphloia Torrey

I enclose scraps of the Cedar of this Bot. Dist. which takes the place of the common red cedar. If not described we must work it up and give it a sp name – Juniperus Arizonensis ? I am taking full notes on its Habitat and will get sections. It is of a fine globular space tower branched with foliage especially in young growth of a silvery aspect. Bark in old growth splitting up into small checkered blocks of a dull heavy aspect some of the older trees look quite venerable having a diameter at base of 2 to 3 ft then about 6 ft from the ground branching out into a regular globular shape. The male & female trees separate the latter often loaded with whitish mealy berries day and inspect the heart wood light red and fragrant. I shall collect seeds with a view to cultivation as it is quite ornamental and might be hardy – I am also a good deal puzzled with the Pinon. The species here is

Pinus monophylla

the P. monophylla but as far as I have seen specimens the leaves are about equally divided on the same shoot in pairs & single. I should not know how to distinguish it otherwise from the New Mex. P edulis which as far as I have examined is always leaves in fours. The other day I found young shoots which exhibited the three leaf as a subtending leafy bract, persistent after the proper axillary leaves are developed. I will enclose you a specimen in my next. I have written to Blander asking him to write to me at Ft Mojave and inform me when I can find him in San Francisco. I am now as usual separated from the main party being left here by Genl Palmer to examine & collect mineral specimens. I go out next week with a small prospecting party to make a tour of inspection thus viewing. When Genl Palmer returns I expect we will make more

to the Colorado, and so on to San Francisco
It is probable now that I may return
by overland route via Salt Lake; early in
March I hope to hear from you at
Fort Mojave at least I wish you would
write me on receipt of this directed
to Camp Bolander San Francisco.

As the 7th near here they had a barometer
since broken I have copied from the
record. Monthly means as follow

1867 Month mean for May	24.403	Therm 66	Therm 68.92
" " " June	23.954	75.5	73.86
mean for 2 months	24.178	70.75	71.39

Therm mean for 1866. 54° max 94° min 2°

I am anxious to hear from you and
get posted in news. I may drop you
a line again before leaving here
I hear of an Army Dr - Dr Chas Smith who
is collecting plants at Tucson I hope
he will report some time

My dear Gray
